

1.17- (Also an attached file sample)

Because we are a small school of 265 students we do in-depth data study of all of our students. We place importance on students achieving in the lowest quartile and develop plans as grade level teams (4-5 teachers and approximately 90 students) to assist those students. Attached is an example of our 6th grade teams presentation of their plan. Names of students have been removed. We use NWEA data for progress monitoring. This testing happens in the beginning, middle and March of each school year. Not only does this provide data on current levels and growth, but also provides very specific areas of strength and weakness with a map for growth and resources for the student connected to Study Island.
